

# Global Opportunities Plus Fund

Factsheet 30 September 2019

## Fund Description

**Fundamental, Valuation, and Technical principles** to identify pockets of value supported by favourable tailwinds, and higher likelihood of gains. This three-pronged approach forms the cornerstone of our investments.

**All-Weather approach** in allocating across traditional and alternative asset classes, geographies, and sectors. A benchmark-agnostic approach gives us the flexibility to focus on generating long-term performance.

**Efficient access** to markets via a single vehicle. Gain cost-efficient exposure to multiple segments of the market and lean on the expertise of renowned investment managers from around the world. Primary investments include, but not limited to, mutual funds and ETFs.

## Glossary of Terms

**Alternatives** – Alternative investments are assets or strategies that have low correlation to traditional long-only equity or bond investments, as defined by the investment manager. Alternatives may complement traditional investments to provide better risk-adjusted returns for the portfolio

**Maximum Drawdown** – Measures the maximum loss from peak to trough of the fund's NAV, before a new peak is attained. This is quoted as a percentage value below the highest realised NAV

**NAV** – Net Asset Value is the value per unit of the fund on the stated date. Calculated by subtracting the value of the fund's liabilities from assets, it is an indication of how much one unit of the fund is worth

**Recovery Period** – Number of days taken for the NAV to attain a new high, after a stated maximum drawdown

**Risk Allocation** – Reflects the allocation of investment exposures across the fund as determined by the investment manager. Measured by aggregating the common exposures across the portfolio into identifiable buckets, such as asset class, geography, sector, or style of investment

**Total Return** – Actual rate of return of the fund, which considers all fees, and any dividends that may be paid over a given period of time

**Volatility** – Measured by Standard Deviation. This is a statistical measure of dispersion of returns, where a higher number indicates a higher level of risk
