

Our Strategy

For investors who believe in the Asia growth story but are worried about a potential United States (US) market crisis affecting it, the **Meranti Asia Fund (MAF)** offers a solution. MAF invests in a basket of Asia companies demonstrating strong potential to maximize returns for shareholders in the next five years, with a proven track record of resilience in past economic downturns and positioning to capture future trends in a drastically changing world. With a fixed budget to hedge against a potential US market crash, investors can be assured of capturing the opportunities of the next decade without worrying about the big "reset".

Who is this suitable for

The strategy is suitable for clients looking for Asia Equity strategy with US market crash protection

Equity holding to maximize returns

Capital Appreciation compounded at 8% target return

Dynamic Risk Management (DRM)
Fixed budget
Keep investors calm

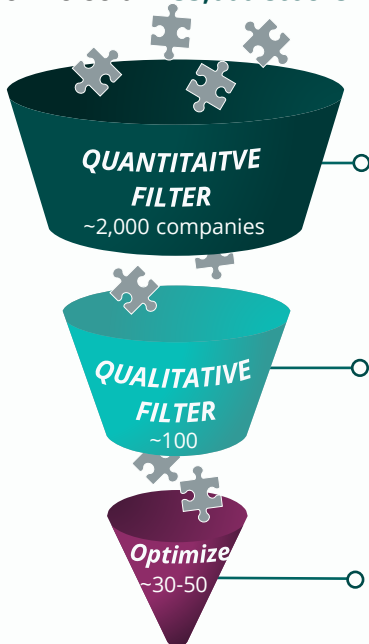

Asia: embracing volatility in a continent rich with opportunities

Asia offers investors access to a wealth of investment opportunities with its 33,000 listed companies. However, uncovering hidden gems takes more than just data. While data serves as an essential filter through which stocks are assessed, the manager's depth and breadth of understanding of Asia companies, alongside the experience of seeing the companies through different cycles, are essential skill to construct an effective portfolio.

Winning formula to uncover hidden gems in Asia

Illustration of how we select stocks within pockets of growth in Asia:

Universe of ~ 33,000 stocks

Quantitative filter: Apply a combination of fundamental metrics and rules to the universe of stocks and continuously assess and filter out interesting opportunities which form the foundation for our stock selection and analysis.

Qualitative filter: On the selected names, we assess the company's business strategy and financial data to identify companies that have strong economic moats to ward off competition and the ability to innovate to overcome challenges and drive growth.

Optimizer: We view the portfolio holdings as a whole, continuously optimized with names that are well positioned in respect of the current trends and the economic environment, to optimize the risk-adjusted return.

How does Dynamic Risk Mitigation (DRM) Help?

Black swan events are unexpected and potentially catastrophic for an investment portfolio i.e. 2008 Great Financial Crisis where the price of global equity markets declined sharply by -60%.

DRM addresses the urge of investors to exit the market in anticipation of market crashes so that investors can stay invested for the long-term. Through the use of a series of option positions, investors are shielded against such extreme market declines, enjoying lower drawdowns and faster portfolio recovery.

		Without DRM	With DRM
Largest Drawdown	2008 FC	-62.09%	-40.53%
	Covid-19	-20.71%	-5.34%
Months to Recover	2008 FC	63	7
	Covid-19	4	2
Total Return		85.97%	175.59%

For illustration purposes only for the period from August 2007 to February 2022. The reference benchmark is the MSCI AC Asia Ex Japan Index.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Target active share > 80%

Market & Portfolio Developments

Fund Commentary

Just as investors were getting used to the summer lull, those in developed markets were surprised by an explosion of volatility as Japanese equity markets dropped 12% on 5th August, the largest decline in a single day since 1987. Some joke that the entire Japanese market is behaving like a stock.

*"You can't take the same actions as everyone else
and expect to outperform" - Howard Marks*

Your Asia fund's equity holdings were down less than 1.5% on the same day. While the underlying investments are only separated by the Sea of Japan, the difference in performance makes it feel like they are on different planets. Going back to July, it was relatively uneventful for the fund amid events such as the US CPI print and its knock-on effects on markets elsewhere around the world. As such, the Asia portfolio was marching to its own beat.

Mr DIY is one stock that truly marches to its own beat. The stock is up 46% this year, beating markets handily. It would no doubt be of interest to investors learning about it recently. But it would have been a totally different story at the start of the year. The stock was down 36% from 2021-2023, grossly underperforming markets. With that kind of track record, few would have been interested in Mr DIY at the start of the year. Accordingly, they would have missed out on the subsequent gains.

As with any investment, in particular for equities, one has to have a thesis, for example the underlying long-term earnings trajectory. However, things as volatility and K-shaped divergence from other markets will keep happening to test investors' resolve. It is so easy at any point to say "this time is different".

Being different is a difficult proposition. One has to be different in order to outperform. Yet being different means there will be periods of underperformance. This has always been understood logically, but hard to accept emotionally.

About FAM: Finexis Asset Management is a Capital Markets Services (CMS) licensed fund management company established in Singapore, focusing on bringing institutional capabilities to private clients. The boutique set-up ensures that we are flexible, responsive and proactive. We embrace the latest technology and constantly improve our processes to complement our investment solutions. Constant evolution to fulfil our investor's needs is ingrained in our beliefs.

For professional and accredited investors only. For fund and sales related enquires please reach out to your finexis financial advisor representative or email us at customer.service@finexisam.com
