

FAM Global Opportunity Plus Strategy

31 August 2024

Our Strategy

In today's uncertain world, partnering with managers well-versed in Alternatives is essential for more predictable outcomes. The FAM Global Opportunity Plus (FGO+) strategy is designed for investors who understand the need to invest across Equities, Bonds, and Alternatives, but prefer to avoid the emotional struggle while navigating a sea of complex data for asset allocation decisions. This paves the way for investors to enjoy the rewards of long-term investing with peace of mind.

20% Alternative holding to **enhance return** and lower volatility

Capital appreciation **compounded at 6%** target return over longer term

FVT

Focus on **undervalued opportunities** with good fundamentals in sustainable trends

Enhanced Multi-Asset Strategy: True Diversification

Having gone through a painful 2022, traditional '60/40' (60% equity, 40% bond) asset-allocation investors are left wondering about the effectiveness of diversification in a 'changed' world. Incorporating a 20% allocation to Alternatives, FGO+ enhanced asset-allocation portfolio delivers a less painful investing experience without compromising on long-term upside potential.

Manage Market Downside

When the traditional '60/40' portfolio faced its worst year in 2022, FGO+ declined less due to the 20% allocation to Alternatives.

Capture Market Upside

In the right market conditions (e.g. Feb 2020 to Jan 2021), FGO+ has managed to deliver similar returns to the global equity index.

Source: Morningstar. (Left) Data from 1/1/2022 - 31/12/2022. 60/40 portfolio: MSCI ACWI Index 60%, Bloomberg Global Aggregate Index 40%. (Right) Data from 1/2/2020 - 30/1/2021. Global equity: MSCI ACWI Index 100%.

Historical Performance

Class	Calendar Return, %							Total Returns, %
	1Month	YTD	2023	2022	2021	2020	2019

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

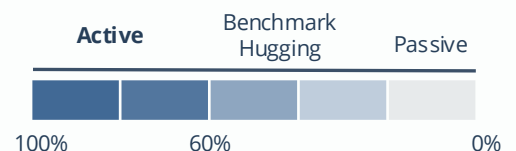

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Target active share > 80%

Market & Portfolio Developments

Fund Commentary

The 60/40 (Equity/Bond) portfolio is used as the starting point for many investors as:

- It gives them exposure to the major asset classes that drive investment returns over time: equities and bonds
- Investors are less likely to be shaken out of their investing journey as the downside volatility is reduced primarily from having less equity, more bond exposures.

With these classical building blocks, the 60/40 provides a mix of capital appreciation and defense for investors.

Why not just capital appreciation

This is crucial as the capital appreciation journey is highly volatile. This year, the peak to trough decline for global equities is over 8%, while FGOP was about half of that. Over the long term, there are +27% years, and there are -20% years that equity investors have to endure. A 60/40 portfolio increases the chances for an investor to get their return by reducing the equity exposure and portfolio declines.

Limitations of the classical 60/40

But what happens when both major asset classes decline, such as in 2022? Is there a third pillar that investors can utilize in their portfolios?

The typical equity and fixed income strategy cannot short, which is why there is no place to hide when both asset classes are down (as shown in the table). Shorting was the only way to be profitable in 2022, and that was what trend following did.

Market Event	Equity	Fixed Income	Trend following
2022 Rate Hikes	-20%	-11%	+19%
2010 Bull Market Confirmation	+10%	+5%	+12%
2008 Global Financial Crisis	-44%	+6%	+18%

Trend following does not just short, it also benefits from up-trends across multiple markets. There were gains in 2010 when equity markets were up.

Nevertheless, just like any strategy, trend following has environments that are inherently challenging for it, such as choppy markets where it is complemented with yield strategies such as fixed income.

Key Position Highlights

We highlight positions that reflect the strategy's tactical asset allocation view, backed by our study of market patterns and trends over time. As a result, our strategies can be highly differentiated from conventional benchmarks. with the aim of long-term investment success.

Alternative Trend-following for Differentiated Returns

- Not all investment strategies are designed to grow the portfolio extensively or to protect the investment during a crisis. A trend-following strategy can act like an 'air-bag' in prolonged down-markets, while also being able to generate returns in a sustained bull-market.

Source: Winton

- The clear benefit of trend-following is the ability to make money in up and down markets and provide a powerful source of diversification to the portfolio's equity and bond positions.

EM & Vietnam To Position For The Next Up-Cycle

Source: Bloomberg. Quarterly price data MSCI Emerging Market Index vs MSCI World Index from 31 Dec 1987 – 31 July 2024

- After a challenging stretch of performance, Emerging Market (EM) equities are set up to do well, offering good upside potential.
- Vietnam is one under-the-radar emerging market. This is an economy with strong growth tailwinds (such as the rapidly growing middle class, strong Foreign Direct Investments, etc.) available at attractive valuations today. This is a good opportunity for us to benefit and capitalize on the next potential 'Asian Tiger' economy with their rapid pace of growth.

Highlight of Sub-Fund Managers

Winton Group Alternative

Winton is a **pioneer in trend-following strategies** and one of the most successful hedge funds in the world. It is led by David Harding, founded in 1997, Winton manages assets on behalf of some of the world's largest institutional investors – with \$10 billion worth of assets in their trend-following strategies today.

Winton has remained at the forefront of markets, capitalizing on trends across various cycles and asset classes, using **highly sophisticated and automated systems to remove human emotions and forecasts from investment decisions**. The firm's trend-following strategy trades 'long' and 'short' in over 100 futures markets to deliver the full benefits of their strategy – such as its ability to make money in up and down markets and provide a powerful source of diversification to equities and bonds. **In 2022, Winton's Trend Fund delivered returns of +18%**, when equity and bonds were down -16% and -18%, respectively.

Since its inception, Winton's flagship strategy has delivered outperformance over traditional equities and bonds in both absolute and risk-adjusted terms, with a **correlation of close to zero and long-term performance of around 10% p.a.**
