

FAM Millennium Equity Strategy

30 September 2024

Our Strategy

Following the 2008 Global Financial Crisis and the 2020 Pandemic, the flood of unprecedented liquidity and low interest rates in markets propelled prices of nearly all assets to record highs. Today, it is increasingly challenging for investors to achieve above-market returns using the “winning formula” of the past decade. The FAM Millennium Equity (FME) strategy is designed for investors who are willing to avoid crowded markets and embrace volatility, to achieve above-market returns over the next decade.

Taking Advantage of the Market Cycle

Just as in nature, there are also seasons in financial markets. Sowing and harvesting in the wrong season can be detrimental to any investment. Rather than trying to accurately predict year-on-year movements, we believe that capturing long-term cycles and trends brings a much greater impact for investors. There have been two important seasons in the past 20 years:

Emerging Market Season (2001 – 2010)

By identifying investments with good fundamentals and investing in them when their valuations are low (sowing) and taking profit when the opportunities mature (harvesting), FME is designed to help investors avoid the possibility of “missing the season”, as the human tendency to chase past performance can prevent them from enjoying future strong returns.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

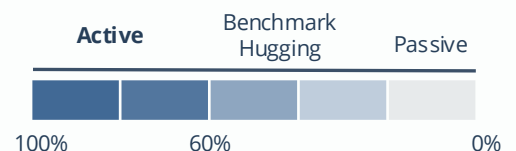

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Market & Portfolio Developments

Fund Commentary

Markets began September on a weak note, seemingly in line with September's historically poor seasonality. However, mid-month brought about a shift in sentiment alongside the outsized rate cut by the US Fed and a surprisingly broad range of stimulus measures coming out of China, which helped push equities higher. **FME was more resilient during periods of volatility, while still capturing good gains when markets rebounded – the strategy recorded increases of 1.75% in the past month.**

Don't fight the US Fed or China PBoC

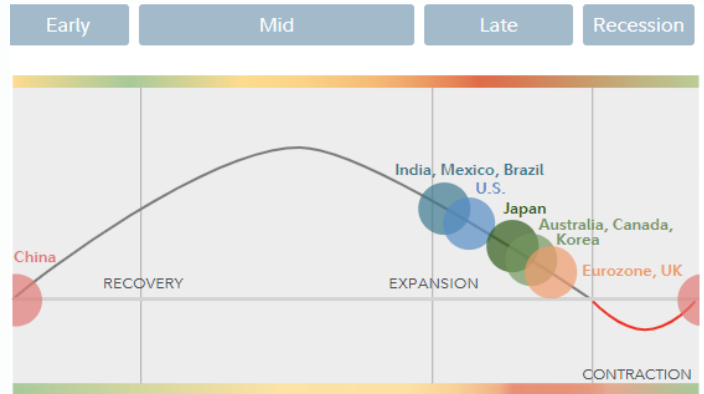

The past month was a clear indication of the commitment by global central banks to steer their economies into a soft-landing. With inflation coming down convincingly, central banks are now able to more confidently use the tools at their disposal to prevent an economic downturn. Indeed, a study by Bank of America showed September being the biggest month of easing since April 2020, with 21 rate cuts across global central banks. China, previously reluctant to embark on meaningful stimulus, also surprised markets with its most aggressive stimulus measures since the pandemic; creating interesting opportunities for global strategies like FME. All else equal, this supports a continuation of the global expansion and is expected to benefit our positions.

That said, data continue to indicate that economies remain in a late-cycle environment characterized by slowing (but not collapsing growth). We remain cautiously optimistic going into the end of the year, balancing higher quality segments such as Healthcare, with positions across Emerging Markets such as China and Vietnam that present better upside potential in a recovery scenario. We are on high alert for any signs of stress (or a growth rebound!) that would prompt us to adjust the strategy positioning.

Key Position Highlights

We highlight positions that reflect the strategy's tactical asset allocation view, backed by our study of market patterns and trends over time. As a result, our strategies can be highly differentiated from conventional benchmarks, with the aim of long-term investment success.

Healthcare for Resilience Amid Late-Cycle Dynamics

Source: Fidelity. Business Cycle

- With major economies and businesses adjusting to the late-cycle phase of the economic cycles (characterized by slowing growth and higher volatility), Healthcare equities offer defensibility as it tends to be less dependent on strong economic growth to do well.
- Our higher quality positions like Healthcare also acts as 'dry powder' in volatile markets, allowing us to take advantage of opportunities when they arise.

EM & Vietnam To Position For The Next Up-Cycle

Source: Bloomberg. Relative price performance. Quarterly price data MSCI Emerging Market Index vs MSCI World Index from 31 Dec 1987 – 31 July 2024

- After a challenging stretch of performance, Emerging Market (EM) equities are set up to do well, offering good upside potential.
- Vietnam is one under-the-radar emerging market. This is an economy with strong growth tailwinds (such as the rapidly growing middle class, strong Foreign Direct Investments, etc.) available at attractive valuations today. This is a good opportunity for us to benefit and capitalize on the next potential 'Asian Tiger' economy with their rapid pace of growth.

Highlight of Sub-Fund Managers

VinaCapital Vietnam Equity

VinaCapital is one of the largest investment management firms in Vietnam with assets under management of US\$ 4 billion. Being Vietnam's only multi-disciplinary investment manager covering the full range of traditional and alternative asset classes, they are uniquely positioned to leverage their broad perspective to create value for investors.

Their goal is to discover the best investment opportunities in Vietnam by leveraging their extensive relationships, local investment knowledge, analytical capabilities, and financial expertise. Such capabilities and local resources are important for investing in one of the fastest-growing emerging economies globally.

The VinaCapital Vietnam Fund (VVF) utilizes a bottom-up stock-picking approach combined with disciplined risk management to identify companies with high quality and earnings growth. The outcome is a high-conviction portfolio of companies that are expected to deliver long-term sustainable capital appreciation for investors.

The strategy has delivered attractive long-term annualized returns of over 10% p.a. representing a meaningful outperformance over the local Vietnam markets since fund inception in July 2015.
