Our Strategy

Throughout human history, no society has enjoyed access to as vast information as we do today. While this abundance and convenience of information have their advantages, it has also brought constant anxiety to investors as they grapple with the decision to buy or sell. Not to mention the pressure they face during unexpected and potentially catastrophic events such as the 2008 Great Financial Crisis where the price of global equity markets declined sharply by -60%. **Meranti Millennium Equity strategy (MME)** is designed to set aside a fixed protection budget to help investors not only stay invested but also top up when markets are at their maximum fear, which is inevitable in the journey of any long-term equity investor.

Invest Globally

No benchmark hugging

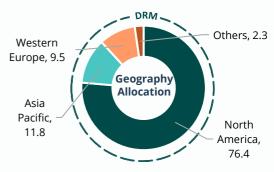

Maximize returns

Capital Appreciation compounded at 8% target return over longer term

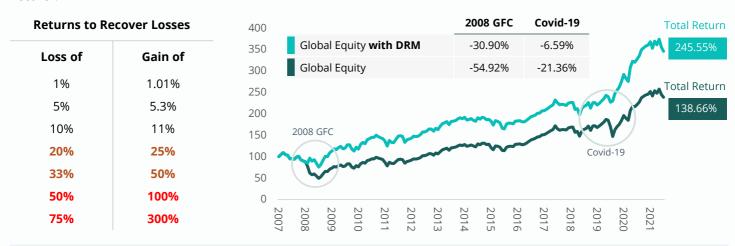

Dynamic Risk Management (DRM) Fixed budget Keep investors calm

Others include Central Asia, Africa/Middle East, South & Central America, and Eastern Europe.

Power Of Loss Aversion In Both Returns And Emotions

Leverage on the Meranti Millennium Equity (MME) strategy to participate in the global economic growth without worrying about market crashes which can hurt investment returns significantly. The greater the loss, the harder it is for investors to recover:

In times of significant market downturns, such as the Great Financial Crisis of 2008 and the Covid-19 pandemic in 2020, an investor using Dynamic Risk Management (DRM) to invest in global equities would have experienced smaller drawdowns and ultimately achieved a higher return than an investor without such protection.

Discerning The Signals From The Noise

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot <u>undervalued opportunities</u> and avoid overpaying for any investment with only good stories.

rend

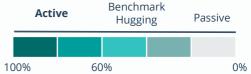

Seek inflection points in <u>sustainable trends</u> to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Market & Portfolio Developments

2024 was a good year provided...

one positioned their portfolio at the start of the year to be very concentrated in US large cap stocks. Indeed, one's investment experience and outcome would have varied enormously on this single decision. 2024 was a case where if one was not in US growth stocks, investing almost anywhere else was a drag. This contributed to lacklustre performance across many active strategies, and FME was not spared. The chart below pretty much sums up equity markets last year: US exceptionalism:

Source: SG Cross Asset Research/Equity Quant, MSC

To be clear, this is different from other years where non-US equity markets performed better. One reason cited for US market dominance in 2024 is that it benefits from the ongoing advancement in technology. One could be forgiven for saying "this time is different". How does one then invest in this "different" world? Will the winners of 2024 persist into 2025?

Who better to weigh in on this than someone who has lived through market cycles since the 1960s: Billionaire investor Howard Marks. He is certainly not anti-American, nor does he dismiss the fact that America has the best and fastest growing companies today. But he reminds investors that good companies may not make good investments.

https://www.oaktreecapital.com/insights/memo/on-bubble-watch

Reasons to sell, and reasons to buy

US exceptionalism is not new; it happened in the 1960s with the Nifty 50. Companies such as IBM and Polaroid introduced massive innovations in technology and consumer products. These companies were considered to be so good that (a) nothing bad could ever happen and (b) there was no price too high for their stocks. Howard Marks noted that as these companies got popular, an investor who bought and held on to them for five years lost well over 90% of their money. This shows that amid all the rapid innovation, human greed and fear continue to impact one's investments.

Howard Marks also noted that while these are things that an investor should worry about, it may be premature to take money off the table. After all, "being too far ahead of your time is indistinguishable from being wrong." One would lose out on further gains if they sold too early. Who likes the feeling of leaving a party too early? Counterarguments include S&P P/E (price to earnings) ratio being high but not insane, and people are not saying "there's no price too high".

Positioning for the road ahead

As lacklustre as last year's performance was, it is paramount to look forward and position the portfolio for the environment ahead. We do that by keeping up with the developments yet also understanding what never changes.

Near term, global equities are expected to continue to do well. The current positive economic backdrop, with the Alnarrative expanding beyond mega-cap tech is overall supportive for risk-assets. In the US, potential tax cuts and de-regulation could also boost corporate earnings, justifying elevated valuations (for now) and allowing for further gains here.

In the near term, the path of least resistance is for markets to be rangebound up till Trump's inauguration on January 20th. More clarity on US policy is required to navigate through Trump's second term, to determine if the same drivers of performance will remain in play. The portfolio is positioned to benefit from further gains in US markets, while being cognizant of risk events that may prompt us to adjust exposures without being too early to leave the party.

About Meranti: The Meranti fund series is named after the Meranti tree, which is native to Singapore and the region. It is a canopy and emergent tree; providing shade from its place at the top layer of a rainforest where sunlight is plentiful. To reach such great heights, the trees have a strong and wide system of roots to help provide stability while also gathering more nutrients. Likewise, Meranti funds were developed around a Dynamic Risk Mitigation process so that investors can invest with confidence and harvest the full potential of capital growth through market cycles.

About FAM: Finexis Asset Management is a Capital Markets Services (CMS) licensed fund management company established in Singapore, focusing on bringing institutional capabilities to private clients. The boutique set-up ensures that we are flexible, responsive and proactive. We embrace the latest technology and constantly improve our processes to complement our investment solutions. Constant evolution to fulfil our investor's needs is ingrained in our beliefs.

For professional and accredited investors only. For fund and sales related enquires please reach out to your finexis financial advisor representative or email us at customer.service@finexisam.com
