

FAM Millennium Equity Strategy

31 March 2025

Our Strategy

Following the 2008 Global Financial Crisis and the 2020 Pandemic, the flood of unprecedented liquidity and low interest rates in markets propelled prices of nearly all assets to record highs. Today, it is increasingly challenging for investors to achieve above-market returns using the “winning formula” of the past decade. The FAM Millennium Equity (FME) strategy is designed for investors who are willing to avoid crowded markets and embrace volatility, to achieve above-market returns over the next decade.

Taking Advantage of the Market Cycle

Just as in nature, there are also seasons in financial markets. Sowing and harvesting in the wrong season can be detrimental to any investment. Rather than trying to accurately predict year-on-year movements, we believe that capturing long-term cycles and trends brings a much greater impact for investors. There have been two important seasons in the past 20 years:

Emerging Market Season (2001 – 2010)

Best	EM 13.8	Asia -5.6	EM 55.8	EM 25.6	EM 34.0	Europe 33.7	EM 39.4	Japan -29.2	EM 78.5	EM 18.9

By identifying investments with good fundamentals and investing in them when their valuations are low (sowing) and taking profit when the opportunities mature (harvesting), FME is designed to help investors avoid the possibility of “missing the season”, as the human tendency to chase past performance can prevent them from enjoying future strong returns.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Commentary

Volatility and Dispersion

The first quarter of 2025 saw extreme volatility across financial markets. Concerns over a US economic slowdown, trade policy ambiguities, and geopolitical risks triggered a sharp selloff in global equities led by the US.

While FME was not spared from the US-led sell-off, our decision to diversify away from Magnificent 7 helped to mitigate some declines (FME is -3.4% vs S&P 500's -4.3% in Q1 2025). Over the quarter, we gradually trimmed overweights in US Tech since DeepSeek's release which challenged the dominance of US tech firms, and added to segments where we are finding better opportunities, such as within Europe.

Preparing for Multiple Outcomes

The global macroeconomic landscape has transformed dramatically since the start of 2025, driven largely by US tariff announcements and a more aggressive stance toward historical allies. In particular, the latest escalation of 'reciprocal tariff' threats on Trump's Liberation Day has led to a highly unpredictable environment in the near term. We focus on maintaining diversified positions that have 1. higher quality, 2. better valuations, and 3. less vulnerable to current trade tensions. This allows us to be better prepared for multiple outcomes going forward.

While the latest tariff escalation has unsettled markets, it is worth remembering that markets have shown remarkable resilience throughout history. While recent developments have meaningfully increased the risk of a negative scenario playing out, there is also a chance of a better outcome if tariff negotiations progress and economic growth hold up.

We remain open-minded and will dynamically adjust exposures as the risk events and tariff negotiations evolve.
